

CROSS TRACK INTEGRATION ACTIVITY.

Track collaborated with: Data science track

Project dependency: Translating our exploratory data analysis into structured, machine-readable feature inputs so potential predictive models can build directly upon our patient behavioral insights.

Information/output received: Conceptual feature weighting structures and risk probability guidelines to help shape how our dashboard flags vulnerable appointment slots.

Information/output provided: Our cleaned 2D risk interaction matrix, non-linear lead-time bins (ranging from 0–6 days up to 30+ days), and core baseline metrics—highlighting our finding of the 67.88% no-show peak for patients booking far in advance with a history of missed visits.

Integration activity completed: Standardized our categorical groupings, formatted our binary target variables, and exported the aggregated risk matrix (`ds_da_feature_matrix_v2.csv`) to simulate a clean model ingestion pipeline.

What changed as a result: Shifted our project from a purely retrospective look at past clinic losses into a forward-looking decision support framework, ensuring our data analytics actively pave the way for automated risk scoring and targeted patient outreach.

Evidence: `HealthConnect_Experience_Lab_Dashboard_v2.pbix` file and `HealthConnect_Risk_Matrix_v2.png` visual screenshot.

Lead Time Bin	0 Past No Shows	1+ Past No Shows	Total
15-30 Days	38.40%	49.65%	43.21%
1-7 Days	22.29%	36.64%	28.29%
30+ Days	55.18%	67.88%	60.49%
8-14 Days	31.65%	36.73%	33.55%
Same Day(0d)	18.37%	33.33%	24.71%
Total	43.51%	55.41%	48.46%
